

# NewLeaf Partners

Make change happen

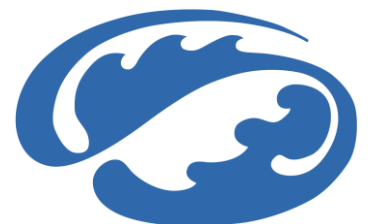

## The Technology

A hosted (SaaS) push technology platform that delivers high frequency, high impact and low duration communications and reinforcement.

In other ways the platform is able to spend 5-10 minutes per day with each employee a couple of times each week to help them stay focused and remember the things they should SAY, DO and KNOW to improve their performance.

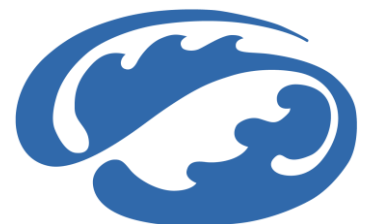

## The Benefits

**95% responds rate compared with 20% using with e-mail based systems**

The system uses a discrete notification system that is above the noise of email.

This means when people get notified they know the system will focus on helping them get better without corrupting their productive time on the job.

# Scenarios are being presented, questions are being asked to check people's knowledge and to confirm their ability to make the right decisions.

The system remembers where each person needs help and will individualize future reinforcement events to fill those gaps – then the system documents the improvement.
